PROFILE

Final-year Computer Engineering student with hands-on experience in full-stack development, AI/ML application building, and academic research. Worked on live industry projects including a government-facing tax portal automation system at Alonzo AI, currently conducting deep-learning research on lung nodule segmentation, and participant in ISRO's Bharatiya Antariksh Hackathon 2025. Genuinely curious about solving real-world problems with technology and always looking to grow.

EDUCATION

B.E. — Computer Engineering (Pursuing)

Sep 2023 – Present

Stanley College of Engineering and Technology for Women, Abids, Hyderabad

Intermediate (MPC) — Narayana Junior College, Narayanguda Campus, Hyderabad

Aug 2021 – Mar 2023

SSC — Rosary Convent High School, Abids, Hyderabad

Jul 2019 – May 2021

TECHNICAL SKILLS

Core: Python, Machine Learning, Model Training & Evaluation, Feature Engineering, Prompt Engineering

ML & Data: Supervised & Unsupervised Learning, NumPy, Pandas, Streamlit, Power BI

LLM & NLP: OpenAI API, Gemini API, Natural Language Processing, LLM-based App Development, FastAPI, REST APIs

Databases: MySQL, SQL, DBMS

Web Development: HTML, CSS, JavaScript, React, React + Vite

Programming: Python, Java, C, C++, JavaScript, Artificial Intelligence

Tools: Git, GitHub, Jupyter Notebook, MS Excel, HTML

INTERNSHIPS

Full Stack Development Intern — Alonzo AI, Hyderabad

Ongoing

- Built a role-based Income Tax Portal Automation System — 3-tier dashboard (Admin, Staff, Professional) that removes the need for clients to repeatedly log into the government IT portal manually.
- Designed and implemented distinct access controls per role; built the complete frontend and backend (HTML, CSS, JS, Node.js, MySQL, REST APIs) and engineered an automated notice dispatch flow — when a client gets a tax notice, the assigned Professional is alerted and notice details are sent to the client automatically.

Research Intern — Deep Learning — Pheenix University (Remote)

Ongoing

- Contributing to a research project on Lung Nodule Segmentation on CT images using deep learning (U-Net variants) with the LIDC: Pulmonary Nodules Segmentation dataset.
- Handles the full pipeline: downloading and preprocessing CT scan data, model training, loss function tuning, and evaluation via Dice score and IoU metrics.

Web Developer Intern — InternPe (Remote)

May 2025 – Jun 2025

- Developed responsive, high-performance web pages using HTML, CSS, and JavaScript; worked in an agile team improving UI/UX and deployed front-end builds through Git.

Participant — Bharatiya Antariksh Hackathon 2025 — ISRO

Jul 2025 – Sep 2025

- Selected for one of India's most prestigious national space-tech hackathons; led development of an Air Quality Visualizer & Forecast Web App with Python, REST APIs, Plotly, and Chart.js; presented working prototype to ISRO mentors.

PROJECTS

Air Quality Visualizer & Forecast Application

- Real-time AQI monitoring dashboard across cities using RESTful APIs, Plotly/Chart.js for interactive graphs and maps, and a forecasting layer built on environmental time-series data.

AI-Based Hypertension Risk Prediction App — GEN AI Forage Hackathon

- ML-powered web app assessing hypertension risk from clinical and lifestyle inputs using feature engineering and supervised learning; surfaces AI-driven health insights and preventive recommendations.

Skill Advisor App

- Interactive web/mobile app guiding students toward the right academic and career paths via a skill-and-subject questionnaire with personalised recommendations and persistent user data storage.

AI-ROS Multi-Agent System

⚡ An intelligent multi-agent orchestration system integrating ROS with LangGraph. Features autonomous robotic task planning, real-time sensor fusion, collaborative agent coordination, and a Next.js dashboard for mission control.

Career OS - AI Career Intelligence

⚡ Full-stack AI-powered career platform with resume analysis, job matching, skill gap detection, learning roadmaps, salary prediction, and an AI career coach. Built with React 19, FastAPI, and advanced NLP models.

AI Resume Analyser

⚡ A robust intelligence tool built for analyzing resumes, parsing key details, performing matching checks, and providing detailed career feedback.

Redrob Ranker

⚡ An automated candidate ranker and grader application leveraging Python backend pipelines to score resumes against job requirements.

StorySpark AI

⚡ Open-source platform designed for creative minds to generate and share multiple creative story variations from a single prompt using generative AI.

Micro-IT Task Manager

â€¢ A practical task management and to-do application designed for micro-IT administrative and tracking workflows.

CERTIFICATIONS

ISRO Certification — Bharatiya Antariksh Hackathon 2025 | Web Development Internship Certificate — InternPe | NAAC Event Volunteer Certificate — Stanley College of Engineering and Technology for Women

ACHIEVEMENTS

- Selected for ISRO's Bharatiya Antariksh Hackathon 2025 — a highly competitive national-level hackathon attracting thousands of applicants across India.
- Delivered a live, client-facing full-stack product at Alonzo AI as an undergraduate intern — not just a demo, but a working system handling real tax automation workflows.
- Conducting active deep-learning research at Pheenix University on medical imaging (lung nodule segmentation) while simultaneously completing engineering coursework.
- Recognised for innovation at the GEN AI Forage Hackathon for building an end-to-end AI health prediction application within tight time constraints.
- GitHub: github.com/JalkamTanusree16 — portfolio spanning web development, ML, and AI application development.
